1. The dam under construction in the Tchala Cirque area (K 79) at Mount Kilimanjaro in the Pila Mountains is 2,394 meters above sea level. The construction of this dam was initially undertaken by the Granite Company in 1941 under a five-year contract and was later taken over by the State. The dam is expected to be completed this year.
2. The dam wall, situated near the confluence of the various streams fed by the Tchala Cirque, is 150 meters long, from seven to 22 meters high and three meters broad at the top.
3. The waters it will contain are estimated at 1,200,000 cubic meters. The dam is to supply energy for a new electric generating station, the Tchala River Station, with an estimated output of 10,000 horsepower.
